Linda,
Here are the retests for some of the samples.

Attached is an excel spreadsheet of the ninety samples from Quincy & Wellesley and our best attempts at defining cases. I've color coded it (perhaps too much) with the intent of making it easier to read. A key to the colors and laboratory abbreviations is given at the bottom of the chart.

Here are my assumptions in defining a case-

- Cases were highlighted alternating yellow & orange to assist in viewing the data.
- All the items from a single defendant constitute one case.
- If a case has a single defendant who is also a co-defendant on another case, they were counted as multiple cases. The ADAs may choose to combine these cases, but the laboratory does not have access to that information.
- Controlled buys, highlighted in blue were not considered cases.
- Cases highlighted in purple are ones for which we have received subpoena requesting witness testimony.

I am preparing a similar chart for the early (May) samples from Cohasset and Dedham. Please let me know if you would like me to make any changes.

Julie
